

moderate perseverance, and trifling expence will enable the most diffident to conduct any case to a happy issue without exposing secret infirmities to any one. The Ointment arrests the spreading inflammation, restrains the excited vessels, cools the overheated skin, alleviates throbbing and smarting pains, and gives great ease. The printed directions for the use of the Ointment also clearly point out when and how Holloway's Pills are to be taken, that their purifying and regulating powers may assist by adjusting and strengthening the constitution.

Notice to Ship-Masters.

THE MERCHANTS of St. John's, finding the errors and rates of Chronometers given here, often egregiously wrong, furnished the subscriber with the means of finding and keeping time with precision, in order to afford Ship-Masters these errors and rates with accuracy. This accuracy is certified by the following:—

"This is to certify that the Gun at the Fort, (fired by a Time ball dropped by Mr. Campbell) indicates the instant of mean noon very correctly,\* as I have taken several opportunities of proving it during our visits to St. John's.  
J. J. P. HITCHFIELD, Master.

Oct. 11, 1863. M. M. S. Vesuvius.  
As the earth revolves on its axis always in equal intervals of time, viz, 24 sidereal hours, equal to 23h. 56m. 41s, mean Solar Time; then, whatever Time a Chronometer shows at the instant when any Star is observed at any meridian, it should show this interval of Time when the same Star is observed at the same Meridian again; if it shows more 'tis gaining, if less, losing. This method requires no calculation, it is free from instrumental error, and also from errors arising from change of parallax, semi-diameter, declination, right ascension, &c., to which the sun, moon and planets are all subject. Thus are the rates of Chronometers determined with absolute certainty.

JAMES CAMPBELL,  
Teacher of Navigation,  
Nautical Academy,

Parties in Conception Bay can have their Chronometers rated by telegrams from St. John's.

SHIP-MASTER.

What do you want to know at sea?  
The sun's true latitude at true mid-day.  
And the Time at Greenwich and the Time at Ship.  
And then to know my compass needle's dip, Which rectified, then find its variation,  
And on each course its exact deviation,  
All these if known, my course wherever bound.  
And distance too, are easy to be found.  
Then to know these, what better can you do,  
Than come to me with a doubloon or two,  
Here you'll be taught whatever you want to know,  
And for each branch, you'll find the terms quite low,  
For bear in mind, your worth will be much greater.  
When known to be a first-rate Navigator,  
Your quadrant the sign of my abode,  
At 100 on Military Road  
\*The Gun was then fired with the precision necessary to rate Chronometers, but it is no fired so now.
